

How to prepare?

How to Prepare for Blueprint Recruitment

This guide explains how to prepare for each stage of the Blueprint recruitment process. You are not expected to know everything.

General Preparation Principles

Before diving into stage-specific advice, keep these principles in mind:

- Focus on clarity over complexity
- Be able to explain your decisions
- Asking thoughtful questions is a positive signal
- We value learning mindset and collaboration as much as technical skill

Technical areas to review

Frontend (React)

- Components and props
- State management (useState, basic useEffect)
- Handling forms and user input
- Making API requests (fetch or axios)
- Basic conditional rendering

Backend (FastAPI)

- Defining API routes (GET, POST, PUT, DELETE)
- Request and response models

- Basic validation
- Understanding how frontend and backend communicate

General

- REST API concepts
- JSON data structures
- Reading and understanding documentation
- Git basics (clone, commit, push)
